

# Research Opportunity

*You can have an extraordinary chance to make a significant contribution toward understanding and treating childhood disorders.*

We are currently recruiting participants between the ages of 5 and 18 years for a study on *bipolar disorder*. We are investigating the biological differences in childhood disorders that have overlapping symptoms (e.g., ADHD, pediatric bipolar disorder, etc.).

The testing time is approximately *two hours* and includes activities such as watching a clip from a popular Pixar video and completing basic word tasks and memory tests while heart rate and respiration are being measured with biofeedback equipment.

***This area of research is very much in need of studies just like this one! Your participation will be very helpful and much appreciated!***

**Participants** must be between the ages of 5 and 18 years. In addition, their parent will be asked to fill out several forms that ask generic questions about their child's behavior.

**The testing time** will be approximately *two hours*.

**Monetary incentives** for participation include:

- \$5.00 for participant
- \$250.00 raffle – the participant's family will be entered into this raffle contest.
